

Environmental Policy

As an innovative technology leader in print and scan management, we aim to develop solutions that help organizations reduce their environmental footprint while increasing productivity and efficiency. Striving for sustainability and an intact environment, we continuously monitor and improve our own products, our business operations and our daily procedures. The framework for our environmental management is our ISO 14001 certification. Also by assuming environmental responsibility, we reflect Canon's environmental promise to customers.

Green Procurement going one step further

In line with with Canon's corporate philosophy, we commit to global environmental conservation through Green Procurement¹ whereby materials, parts and products that have a lower environmental impact are favored whenever necessary resources are procured and purchased. As part of this effort, we send out questionnaires to our suppliers, enquiring about their implementation of environmental policies, thus pushing forward their environmental agenda.

We make certain that our products not only conform to EU guidelines but also meet more elaborate specialized requirements. As a result, our hardware products are certified according to globally recognized standards such as UL, CE, FCC, IC, VCCI, WEEE, and RoHS.
