

NT-ware Products

Leading in Print, Scan and Device Management

Keeping a close eye on customer and market requirements, NT-ware designs, develops, maintains and supports software solutions that meet the challenges of modern print and document handling processes. Our technology is aimed at optimizing our customers businesses by saving costs, improving security and increasing productivity. As we develop and integrate all required components in-house, we can react quickly and flexibly to meet specific demands and satisfy complex customer requirements.

Our flagship product is uniFLOW. This software comprises numerous features and comprehensive functionality for an efficient print, scan and device management. It is scalable to any size of organization and has a modular architecture. Different product variants of uniFLOW are aimed at smaller businesses with a need for the most important basic functions of the software.

Installation as well as 1st and 2nd-level-support is provided by local Canon subsidiaries, or certified partners, who have full access to NT-ware's technical support team if an issue cannot be resolved immediately.

As uniFLOW is an software focused on workflow and business processes it can usually be tailored to meet business requirements during installation. Where more specific requirements are raised the NT-ware Project Team can evaluate and incorporate adaptations to integrate uniFLOW with existing computer systems.

In most instances, proximity or magnetic card readers can be used for authentication purposes within uniFLOW, allowing the user to access printing and scanning devices and make use of uniFLOW functionality. uniFLOW tightly integrates with a variety of supporting computer hardware including a range of card readers that cover the vast majority of card technologies available on the market. NT-ware can test existing card systems and recommend a suitable card reader.
